

SOP-QA-MRD-015 - Data Integrity and ALCOA+ Controls

Meridian Labs - Quality Assurance

Reference	SOP-QA-MRD-015	Version	V2
Type	Standard Operating Procedure	Mise en activite	2025-04-28
Entite	Meridian Labs - Quality Assurance	Redacteur	Sarah Delaunay
Statut	En activite	Approbateur	Marc Villeneuve

1. Purpose

This standard operating procedure defines the data integrity controls applied to electronic records produced and maintained by Meridian Labs across its quality, medical information and pharmacovigilance systems.

2. ALCOA+ principles

All electronic records must be Attributable, Legible, Contemporaneous, Original and Accurate, and in addition Complete, Consistent, Enduring and Available throughout the retention period.

3. Audit trail review

Audit trails of GxP-relevant systems are reviewed on a monthly basis by the system owner. Any anomaly detected during the review is raised as a non-conformity under PR-QA-MRD-009.

4. Electronic signatures

Electronic signatures comply with 21 CFR Part 11. Each signature captures the signer identity, the date and time in UTC, and the meaning of the signature. Signature components are never reused or reassigned to another individual.

5. Record retention

GxP electronic records are retained for 15 years from the date of creation. Retention is enforced technically through storage lifecycle policies and verified during the annual data integrity self-inspection.

6. Training

All staff handling GxP electronic records complete data integrity training as part of the initial training path described in PR-RH-MRD-018, and a refresher every 2 years alongside the training plan defined in PR-RH-MRD-006.

Historique des revisions

Version	Date	Objet de la revision
V2	2025-04-28	Audit trail review frequency changed from quarterly to monthly
V1	2023-11-06	Initial release

Document fictif genere pour une demonstration technique. Meridian Labs est une organisation imaginaire ; toute ressemblance avec une organisation reelle serait fortuite.
